

one other thing i thought of are the rules for the agenda pages: we need to make sure they are codified (they can change when the new year starts) but these need to be identified as "sources of truth"

1. i mentioned the "2025-2026 FPK Canvas Guidelines", which you just referenced. I think we need to break that document down, in order to formalize the agenda rules, page rules, posting rules (when pages need to be updated) - we typically send an "announcement" to parents with a short message - "Good afternoon, I hope you had a great week!

(option 1): Next week's agenda page for [math] has been updated.

(option 2) I wanted to let you know that that Canvas pages have been updated for next week.

(variations can be created for each class / each week so they are not the same for every class, every week. But can eventually rotate since eventually running out of options to say the same thing can hallucinate to weird things).

Have a wonderful weekend!

Owen Reagan

This would be on schedule send as an announcement in Canvas for Fridays, 4PM. After the Canvas app updates and makes next week's agenda page live.

2. Test announcements- look at the saved data and guidelines - I had an announcement auto/schedule send 1 week (5-7 days in advance). Then I would have a reminder email send 2 days before the test.

-Attachments to the announcements: math tests include URL attachments / downloadable links and file uploads to: The Power Up for the Fact Test, Blank Study Guide, and Completed Study Guide. Reading Tests, Shurley Tests, and History Tests usually had a study guide attachment.

3. guidelines for what goes on the agenda page: heading, reminders, resources, the days, in class, at home

4. guidelines for assignment creation for each class

5. in the many files, builds, ect. you might have access to it - if not we definitely need to have very important logics:

-Math:

I've extracted the core logic and rules for Math assignment creation and mapping in the Thales Academic OS (Canvas) from the files provided. Here is the comprehensive logic engine for Math:

1. Assignment Logic: The Math Triple Sequence

When a Math row is marked as a **Test** on Day N, the system automatically expands that single row into three separate assignments (the "Math Triple Sequence").

-

Written Test: Assigned on Day N, placed in the "Written Assessments"

assignment group, worth 100 points, due on Day N.

- **Fact Test:** Assigned on Day N, placed in the "Fact Assessments" assignment group (also sometimes referred to as Written Assessments in the prompt config), worth 100 points, due on Day N. The title dynamically includes the fact type pulled from the Fact Test Map (e.g., "Fact Test — division with remainder").
- **Study Guide:** This is always assigned on **Day N-1** (the day *before* the test). It is placed in the "Homework/Class Work" assignment group, graded as pass/fail (0 points), and explicitly set to `omit_from_final: true` (it does not count towards the final grade).

2. Homework Naming Convention: Odds/Evens

The system deterministically names homework assignments based on the lesson number's parity.

- **Even Lesson Numbers:** The assignment title automatically appends "Evens HW" (e.g., *SM5: Evens HW — Lesson 92*).
- **Odd Lesson Numbers:** The assignment title automatically appends "Odds HW" (e.g., *SM5: Odds HW — Lesson 91*).

3. The Friday Rule Exception

Fridays have a hard block on standard homework and assignments.

- No homework is ever generated on a Friday.
- The entire "At Home" HTML block is automatically omitted from Friday pages (replaced with text like "No homework over the weekend — enjoy!").
- **The Exception:** Assignments are *only* created on a Friday if the type is explicitly set to "Test". (Test announcements are also permitted to post on Friday at 4 PM) .

4. Resource Binding (The "Grabber" Logic)

When a Math lesson (e.g., Lesson 90) is entered, the logic engine resolves a strict array of reference codes to attach files to the Canvas page.

- **Specific Lesson Book:** E.g., `Math_Lesson_090`.
- **Homework Sheets:** Both `HW_Evens` and `HW_Odds` are attached to every standard lesson.
- **Reteaching Bundle:** The system calculates a 10-lesson range (e.g., Lesson 90 pulls `Math_Reteaching_L081`).

- **Reference Textbook:** Math_Textbook is globally injected on all Math pages.
- **Study Guides (Double-Attach):** For a test, both the Blank and Completed versions of the Study Guide are automatically injected into the assignment, the resources block, and announcements.

5. Power Up Mapping (Lessons 1-120)

The system uses a hardcoded mapping to resolve the specific "Power Up" letter (A-K) for every lesson. This is used for resource attachment and announcements.

- **Power Up A:** Lessons 1-8
- **Power Up B:** Lessons 9-15
- **Power Up C:** Lessons 16-19, 65, 71, 75
- **Power Up D:** Lessons 20-21, 25, 30, 34, 38, 42, 45, 72
- **Power Up E:** Lessons 23, 28, 32, 36, 40, 43, 68
- **Power Up F:** Lessons 22, 24, 26, 27, 29, 31, 33, 35, 37, 39, 41, 44, 46, 47, 50, 52, 53, 55, 57, 59, 61, 63, 64, 66, 69, 73, 89, 90
- **Power Up G:** Lessons 48, 49, 51, 54, 56, 58, 60, 62, 67, 70, 74
- **Power Up H:** Lessons 76-88
- **Power Up I:** Lessons 91-100
- **Power Up J:** Lessons 101-110
- **Power Up K:** Lessons 111-120.

6. Fact Test Mapping (Tests 1-23)

Math reminders dynamically pull the specific Fact Type and the correct Power Up letter for parent practice based on the Test Number. The test number is derived from the lesson number: **testNum = Math.floor(lessonNum / 5)**.

- **Math Test 1 & 2:** Power-Up A (Addition facts starting with 5+5, 2+9)
- **Math Test 3, 6, 7:** Power-Up B (Subtraction facts starting with 9-8, 8-5)
- **Math Test 4, 8, 10:** Power-Up C (Multiplication facts starting with 9x6, 7x1)
- **Math Test 9, 11:** Power-Up D (Division facts starting with 49÷7, 25÷5)
- **Math Test 12 & 13:** Power-Up E (Division facts starting with 81÷9, 48÷8)
- **Math Test 14, 15, 16:** Power-Up F (Multiplication facts starting with 7x9, 4x4)

- **Math Test 17, 19, 21:** Power-Up H (Improper fractions starting with $\frac{8}{3}$, $\frac{12}{4}$)
- **Math Test 18:** Power-Up G (Division with remainders starting with $7 \div 2$, $16 \div 3$)
- **Math Test 20 & 23:** Power-Up I (Reducing fractions to lowest terms starting with $\frac{2}{10}$, $\frac{3}{9}$)
- **Math Test 22:** Power-Up J (Simplifying fractions starting with $\frac{6}{4}$, $\frac{10}{8}$)

Based on the architectural documents, logic engines, and codebase audits for the Thales Academic OS, here is the complete, compiled rule set and logic system governing **Reading and Spelling**:

1. The "Together Logic" (Combined Agenda & Posting)

Reading and Spelling are treated as a unified literacy block rather than separate Canvas modules.

- **Course Consolidation:** Both subjects are structurally merged and hard-routed to a single Canvas course (**Course ID: 21919**).
- **Shared Agenda Page:** The system generates one unified HTML agenda page titled "Reading + Spelling."
- **Announcement Merging:** If the pacing grid contains any Spelling rows for the week, the system automatically merges the Spelling information into the Reading weekly announcement.
- **Brevity Mandate:** The Canvas automation engine strips proprietary vendor names from all titles. "Reading Mastery" and "Spelling Mastery" are completely removed, leaving clean labels (e.g., "Reading Lesson 100" or "Spelling Test 23") with no page numbers.

2. Spelling Announcement Logic & The "5 Focus Words"

Spelling tests have a specialized data map and AI generation loop for parent communications.

- **The SPELLING_TEST_MAP Engine:** The system uses a strict backend dictionary mapping 24 Spelling Tests (Tests 1–24). Each test is mapped to exactly 25 words.
- **Focus Words Isolation:** The logic explicitly targets array indices 20–24 (the final 5 words of the 25-word list) and flags them as the **"5 Focus Words."**
- **Announcement Injection:** When a Spelling Test is detected on the pacing guide, the weekly announcement automatically injects a notice telling parents to study the cumulative list, but dynamically generates a bulleted 🎯 Focus Words (21–25) section with those 5 specific, high-

challenge words (e.g., *Refreshing, Light, Should, Planned, Undeclared*).

3. Reading & Spelling Resource Generation (The "Literacy Grabber")

To prevent overwhelming students and parents with massive 500-page textbook PDFs, the "Grabber" logic attaches specific chunks and persistent tools to the "Resources" block of the Canvas page.

- **Persistent Assets:** The system is hardcoded to *always* attach the **Master Spelling List** ("Spelling Words and Rules Workbook D.pdf" / "Test Prep.pdf") and the **4th Grade Reading Workbook** to the resources block across all weeks in a quarter.
- **Dynamic Textbook Chunks:** The Grabber calculates the current lesson and links smaller, chunked textbook files (e.g., "Reading Textbook: Lessons 26-50" or "Reading Textbook: Lesson 51-77.pdf") instead of the whole book.
- **Supplemental Files:** Items like "Book A Glossary," "Book B Glossary," and the "Reading Homework Heading and Set-Up" guide are also auto-attached.

4. Reading Homework & Communication Rules

Reading homework and instructions follow strict, mandated phrasing for consistency in the 4th-grade classroom.

- **Mandated AI Phrases:** Any AI-generated text regarding Reading homework or practice must explicitly include the exact phrases:
 - *"tracking and tapping"*
 - *"read out loud every day"*
 - *"100 words in one minute with 2 or fewer errors"*
 - *"story details, background information, and vocabulary"*
- **Friday Logic (Universal):** Like all subjects, Reading and Spelling strictly obey the Friday block. No "At Home" homework is ever generated on Fridays unless it is an explicit test day.
- **The "Checkout" Split:** The system relies on a "Reading Checkout split" mechanic, likely indicating different rotational groups or staggered pacing for reading fluency checks.

5. Reading & Spelling Assignment Creation

Assignments are generated automatically based on specific keywords in the pacing guide.

- **Testing Triggers:** Assignments are specifically triggered when the pacing text includes "Test" (e.g., "Reading Test 13" or "Spelling Test 75").
- **Omission of Standard Lessons:** Unlike Math (which generates daily evens/odds assignments), Reading and Spelling do not generate daily Canvas submission buckets for standard lessons, keeping the Canvas gradebook uncluttered.
- **"No Comp" Exceptions:** As part of the classroom economy, there is logic for "No Comp Passes," which act as automated exemptions allowing

students to skip the comprehension questions on standard reading homework.

Reading Comprehension Logic: When writing the assignment description, include these details about where the comprehension questions can be found:

Based on the provided documentation and system specifications for the Thales Academic OS, here is the consolidated technical manual for Agenda page formatting, styling, and structural rules.

Thales Academic OS: Agenda Page Formatting & HTML Specification

All Canvas Agenda pages are generated as HTML Wiki Pages, automatically set as the course "Front Page," and must strictly adhere to the following visual and structural guidelines.

1. Visual Style & Color Tokens

The system enforces strict visual uniformity using inline CSS to bypass Canvas's rich-text sanitizer. Branding must follow these hex codes:

Element	Hex Code	Purpose
Primary Blue	#0065a7	Subject Banners, Day Headers, and main structural borders.
Secondary Teal	#00c0a5	Resources blocks and secondary headers.
Danger Red	#c51062	High-priority Reminders and assessment alerts.
Q4 Gold	#c87800	Used for border-bottom accents in specific headers.

Wrapper Styling: Every page must be wrapped in a container (div) featuring a **5px solid #0065a7 left border** to ensure a professional, condensed layout on mobile devices (Canvas Parent App).

2. Structural Layout

Pages must follow this precise order of components:

1. **Header/Banner:** Centered banner using h2 with a linear gradient (135deg, #0065a7 to #003f81).
2. **Subtitle:** Must follow the format: Quarter [X], Week [Y] | [Date Range] (e.g., *Quarter 3, Week 8 | March 2-6, 2026*).
3. **Reminders Block:** A red (#c51062) block containing a fa-exclamation icon. It is generated automatically if the week contains tests or checkouts.
4. **Resources Block:** A teal (#00c0a5) block containing direct `instructure_file_link` anchors to all required PDFs.
5. **Daily Content:** Split into **In-Class** and **At-Home** blocks.

3. Academic Logic & "Brevity Mandate"

To reduce cognitive load on parents, the system enforces a strict "Brevity Mandate".

- **Detail Stripping:** Verbose descriptions, "Learning Objectives," and "Essential Questions" are systematically stripped by the `rulesEngine.ts` and `canvas-html.ts` utilities.
- **Smart Titling:** Shorthand entered in the pacing guide (e.g., "11.4") is automatically expanded for display (e.g., "Chapter 11, Lesson 4").
- **The Friday Rule:**

- **At-Home:** The entire "At-Home" section is physically deleted from the page output on Fridays, unless there is a specific test.
- **In-Class:** History and Science may append "Cash Out 🏠" on Fridays.
- **"Together Logic" (Reading & Spelling):** These are merged into a single visual agenda page.
 - **Reading Setup:** Displays "In Class: Spelling: Lesson #..." and "Reading: Lesson #..."
 - **At-Home:** Links the Reading Workbook and comprehension questions, while reminding students to study spelling words.
- 🔗 **4. Assignment Linking**
 - **At-Home Links:** The "At-Home" section must contain a direct, clickable hyperlink to the live Canvas Assignment URL.
 - **Submission Format:** All assignments created by the system are set to submission_types: ["on_paper"] to avoid digital clutter, with a default due time of 11:59 PM.

Based on the provided documentation and system specifications for the Thales Academic OS, here is the consolidated technical manual for Agenda page formatting, styling, and structural rules.

🏛️ **Thales Academic OS: Agenda Page Formatting & HTML Specification**

All Canvas Agenda pages are generated as HTML Wiki Pages, automatically set as the course "Front Page," and must strictly adhere to the following visual and structural guidelines.

🎨 **1. Visual Style & Color Tokens**

The system enforces strict visual uniformity using inline CSS to bypass Canvas's rich-text sanitizer. Branding must follow these hex codes:

Element	Hex Code	Purpose
Primary Blue	#0065a7	Subject Banners, Day Headers, and main structural borders.
Secondary Teal	#00c0a5	Resources blocks and secondary headers.
Danger Red	#c51062	High-priority Reminders and assessment alerts.

Q4 Gold	#c87800	Used for border-bottom accents in specific headers.
----------------	---------	---

Wrapper Styling: Every page must be wrapped in a container (div) featuring a **5px solid #0065a7 left border** to ensure a professional, condensed layout on mobile devices (Canvas Parent App).

2. Structural Layout

Pages must follow this precise order of components:

1. **Header/Banner:** Centered banner using h2 with a linear gradient (135deg, #0065a7 to #003f81).
2. **Subtitle:** Must follow the format: Quarter [X], Week [Y] | [Date Range] (e.g., *Quarter 3, Week 8 | March 2-6, 2026*).
3. **Reminders Block:** A red (#c51062) block containing a fa-exclamation icon. It is generated automatically if the week contains tests or checkouts.
4. **Resources Block:** A teal (#00c0a5) block containing direct `instructure_file_link` anchors to all required PDFs.
5. **Daily Content:** Split into **In-Class** and **At-Home** blocks.

3. Academic Logic & "Brevity Mandate"

To reduce cognitive load on parents, the system enforces a strict "Brevity Mandate".

- **Detail Stripping:** Verbose descriptions, "Learning Objectives," and "Essential Questions" are systematically stripped by the `rulesEngine.ts` and `canvas-html.ts` utilities.
- **Smart Titling:** Shorthand entered in the pacing guide (e.g., "11.4") is automatically expanded for display (e.g., "Chapter 11, Lesson 4").
- **The Friday Rule:**
 - **At-Home:** The entire "At-Home" section is physically deleted from the page output on Fridays, unless there is a specific test.
 - **In-Class:** History and Science may append "Cash Out  " on Fridays.
- **"Together Logic" (Reading & Spelling):** These are merged into a single visual agenda page.
 - **Reading Setup:** Displays "In Class: Spelling: Lesson #..." and "Reading: Lesson #..."

- **At-Home:** Links the Reading Workbook and comprehension questions, while reminding students to study spelling words.
- 🔗 **4. Assignment Linking**
 - **At-Home Links:** The "At-Home" section must contain a direct, clickable hyperlink to the live Canvas Assignment URL.
 - **Submission Format:** All assignments created by the system are set to submission_types: ["on_paper"] to avoid digital clutter, with a default due time of 11:59 PM.

Based on the provided documentation for the Thales Academic OS, here is the technical specification for Canvas Agenda page formatting, structural rules, and approved styling.

🏛️ **Thales Academic OS: Canvas Agenda Formatting Specification**

All Canvas Agenda pages are generated as **HTML Wiki Pages** and are configured as the Course "Front Page." To bypass the Canvas rich-text editor's sanitizer and ensure professional, mobile-friendly display, the system strictly enforces the following rules.

🎨 **1. Visual Style & Color Tokens**

The system uses inline CSS to maintain uniform branding across all subject courses.

Element	Hex Code	Purpose
Primary Blue	#0065a7	Main Banner, Day Headers, and structural borders.
Secondary Teal	#00c0a5	Resources blocks and secondary headers.
Danger Red	#c51062	High-priority Reminders and assessment alerts.
Dark Grey	#333333	Subheader background.

- **Wrapper Styling:** Every page must be wrapped in a <div class="kl_wrapper">.
- **Structural Border:** The wrapper must feature a **5px solid #0065a7 left border** to ensure a professional, condensed layout on mobile (Canvas Parent App).

🏗️ **2. Structural Layout Rules**

Pages must follow this precise order of components:

1. **Header/Banner:** Centered banner using <h2>.

2. **Subtitle:** Week of [Date Range] formatted clearly.
3. **Horizontal Rule:** <hr/> separator after the header.
4. **Daily Blocks:** Iterated for Monday through Friday.
 - **Day Heading:** <h3>Day Name (Date)</h3>
 - **Content:** Unordered lists () containing list items () for each lesson segment.

3. Content Rules & "The Brevity Mandate"

To reduce cognitive load for parents, the system enforces strict content rules:

- **The Brevity Mandate:** Verbose descriptions, "Learning Objectives," and "Essential Questions" are systematically stripped by the rules engine.
- **Friday Exception:** The "At-Home" section is physically deleted from the page output on Fridays, unless there is a specific test.
- **"Together Logic" (Reading & Spelling):** These subjects are merged into a single visual agenda page within Course 21919.
- **Smart Titling:** Pacing shorthand (e.g., "11.4") is automatically expanded for display (e.g., "Chapter 11, Lesson 4").

4. Specialized Heading Style

For instructional sub-blocks within a day (e.g., "In Class" vs "At Home"), use these specific sub-headings:

- **CSS Style:** background-color: #333333; color: white; padding-left: 40px; width: 60%;
- **Heading:** Use <h3> tags for section titles like:
 - <h3>  Resources</h3> (Teal branding)
 - <h3>  In Class</h3>
 - <h3>  Homework</h3>

5. Assignment & Resource Linking

- **At-Home Links:** If atHomeUrl exists, the homework text must be wrapped in an <a> tag.
- **Resource Resolution:** Resources are pulled automatically based on subject/lesson. They must be organized vertically with bullet points (•) and margin-left: 20px.
- **Auto-Linking:** Use the class auto_link for all direct file links to ensure they are clickable and correctly routed within the Canvas environment.

6. Engineering Safeguards (System Logic)

These rules are enforced by the canvas-html.ts and rulesEngine.ts utilities to prevent data drift:

- **Idempotency:** Before any deployment, the system performs an internal index search (by page slug or ID) to perform an UPDATE rather than creating a duplicate page.
- **Hash-Based Change Detection:** A content_hash is calculated (subject + day + lesson + type). If the hash matches the last deployment, the

system triggers NO_CHANGE and skips the API call to save resources.

- **Front Page Protection:** Any page tagged as the "Front Page" is automatically forced to published: true to prevent 400 errors from the Canvas API.

Based on the technical documentation for the Thales Academic OS, all agenda pages must be wrapped in a **<div class="kl_wrapper">**. "Together Logic" mandates that Reading and Spelling be merged into a single visual agenda page.

1. General Agenda Layout (Applies to all)

Every course follows this structure, using the primary blue color (**#0065a7**) for the left border and specific headings.

HTML

```
<div class="kl_wrapper">
  <h2> 📅 Weekly Agenda – [Subject]</h2>
  <p><strong>Week of [Date Range]</strong></p>
  <hr/>
  <h3>Monday <span style="font-weight:normal; font-size: 0.8em; color:
#666;">(Date)</span></h3>
  <ul>
    <li> 📖 <span class="auto_link">[Lesson Name]</span></li>
    <li> 📝 [Specific Lesson Info]</li>
  </ul>
</div>
```

2. "Together Logic" (Reading & Spelling Example)

Reading and Spelling are unified into one course/page (Course 21919). The agenda must integrate both subjects into the daily blocks.

HTML

```
<div class="kl_wrapper">
  <h2> 📖 Reading & Spelling Weekly Agenda</h2>
  <p><strong>Week of [Date Range]</strong></p>
  <hr/>

  <h3>Monday <span style="font-weight:normal; font-size: 0.8em; color:
#666;">(Date)</span></h3>
```

```
<ul>
  <li><strong>Spelling:</strong> Lesson [X]</li>
  <li><strong>Reading:</strong> Lesson [Y]: "[Title]"</li>
</ul>
```

```
<h3>🏠 Homework</h3>
```

```
<ul>
  <li>Reading: <span class="auto_link">Lesson [Y] Workbook</span></li>
  <li>Spelling: Study master word list</li>
</ul>
```

```
</div>
```

3. Subject-Specific Code Examples

Math (Course 21957)

Math includes specialized resources and homework labels based on odd/even lessons.

HTML

```
<h3>Tuesday <span style="font-weight:normal; font-size: 0.8em; color:
#666;">(Date)</span></h3>
```

```
<ul>
  <li>📚 <span class="auto_link">Math Lesson 63 Resources</span></li>
  <li>📝 Lesson 63</li>
  <li>⚡ <span class="auto_link">Math Power Up F</span></li>
  <li>🏠 <span class="auto_link">Math Lesson 63 Homework</span> (Odds)</li>
</ul>
```

Language Arts (Course 21944)

Focuses on Shurley English patterns and practice.

HTML

```
<h3>Wednesday <span style="font-weight:normal; font-size: 0.8em; color:
#666;">(Date)</span></h3>
```

```
<ul>
  <li>📚 <span class="auto_link">Language Arts 9.2/CP31</span></li>
  <li>📝 9.2/CP31</li>
  <li>🎵 <span class="auto_link">Shurley Jingles Collection</span></li>
</ul>
```

Key Technical Rules to Remember:

- **The Brevity Mandate:** Strip all "Learning Objectives" and "Essential Questions"—only include lesson titles/numbers.
- **Friday Rule:** The "At-Home" section is explicitly omitted on Fridays, unless a specific test is scheduled.
- **Resource Linking:** Always use `<span class="auto_link">` for file references to ensure they are clickable and correctly routed within the Canvas environment.

To implement this logic, you must treat your pacing data as a **mutually exclusive state machine**. In your **rulesEngine.ts** or the logic layer handling your Canvas deployments, you need to implement a **"Subject-Swap Interlock"**.

The Logic Rule: Mutual Exclusivity

The system must check the state of the day's pacing for both subjects before generating any output.

The Rule:

1. **If History == "X":** History is "No Class"; Science is "Active" (pull Science pacing data).
2. **If Science == "X":** Science is "No Class"; History is "Active" (pull History pacing data).
3. **Default Handling:** If both are populated, the system defaults to the Pacing Master priority (History priority). If both are "X" or "-", both render "No Class".

Implementation (Pseudocode/Logic Template)

When generating the agenda page for either subject, use this interlock logic:
JavaScript

```
function getSubjectContent(subject, dayData) {
  // Check for "No Class" indicator
  if (dayData[subject] === "X" || dayData[subject] === "-") {
    return "<em>We are currently having the other half of this track. Please
check the corresponding Canvas page.</em>";
  }

  // Return standard pacing data
  return dayData[subject];
}
```

HTML Output Examples

The system will inject these templates based on the state of your pacing grid.

1. When History is Active (Science rendered as "No Class")

In `agenda_Science.html`:

HTML

```

<div class="kl_wrapper">
  <h2>📅 Weekly Agenda – Science</h2>
  <h3>Monday</h3>
  <ul>
    <li><em>We are currently having History for this half of the track. Please
check the History Canvas page.</em></li>
  </ul>
</div>

```

2. When History is "X" (History rendered as "No Class")

In `agenda_History.html`:

HTML

```

<div class="kl_wrapper">
  <h2>📅 Weekly Agenda – History</h2>
  <h3>Monday</h3>
  <ul>
    <li><em>We are currently having Science for this half of the track. Please
check the Science Canvas page.</em></li>
  </ul>
</div>

```

Summary of Enforcement

- **Trigger:** The system inspects the pacing row for the weekId.
- **Normalization:** Any string entry that is strictly "X" or "-" triggers the "Mutual Exclusivity" replacement string.
- **UX Consistency:** Because these are separate Canvas Courses (History: 21934, Science: 21970), this message provides a clear, clickable path (if you hyperlink the text to the other course URL) to ensure parents do not get lost.

Would you like me to update your `agenda_generator.py` script to include this

specific **if-else** interlock logic?

Based on the Thales Academic OS codebase and configuration logs, the following table summarizes the codes, abbreviations, and their translations used across your pacing guides, Canvas agenda pages, and automation engine.

Pacing Guide Codes & Translations

Code / Abbreviation	Translation / Meaning	Notes
"X"	No School / No Class	Triggers the exclusion of homework and specific agenda blocks.
"_"	No Class	Used similarly to "X" to render "No Class" on agenda pages.
"CLT"	School Testing Day	Automatically normalized to "CLT Testing" ; triggers "Testing Day" override (no homework).
"CP"	Classroom Practice	Used in Language Arts; triggers assignment creation.
"lesson"	Instructional Lesson	Standard daily activity type.
"test"	Assessment	Triggers specific assignment creation rules (e.g., Math Triple Sequence).
"checkout"	Fluency/Benchmark Assessment	Assessment type that includes specific fluency benchmarks (e.g., WPM goals).
"review"	Review Activity	Non-instructional/non-assessment lesson.
"study_guide"	Study Guide	Triggers creation of specific study guide assignments.

Canvas Prefix/Canonical Mappings

These codes are used to standardize titles in Canvas and the Pacing Master.

Subject	Course ID	Canonical Prefix
Math	21957	SM5 (Saxon Math 5/4)
Reading	21919	RM4 (Reading Mastery 4)
Language Arts	21944	ELA4 (Shurley English)
Spelling	21919	SPELL (Merged with Reading)
History	21934	N/A (No assignments)
Science	21970	N/A (No assignments)

Key Logic Rules for Translation

- **Math Parity:** Lesson numbers use suffixes "**Evens HW**" or "**Odds HW**" based on the lesson number parity (e.g., "SM5: Evens HW — Lesson 92").
- **Brevity Mandate:** Automated scripts strip vendor names ("Saxon Math", "Reading Mastery", "Shurley English") from all public-facing titles.
- **Together Logic:** Reading and Spelling pacing rows are merged into a single Canvas agenda page in Course 21919.
- **Friday Exception:** Standard homework assignments are never generated on Fridays unless the activity type is "Test".
